

Warehouse playbook

Build a warehouse that performs every shift.

When the warehouse is under pressure, everything depends on processes that are fast, accurate and dependable. You need SAP to keep pace, not slow you down. That's where we come in.

At TCT we specialise in designing and optimising SAP-driven warehouses. We cut through complexity, remove friction and create solutions that help your teams work smarter, faster and with complete confidence.

Build a warehouse that performs at its best

Your operation lives and dies on throughput, accuracy and control. We help you redesign and refine your SAP processes so the warehouse runs smoothly across every shift.

Whether you're working with LGM, TM, IM, WM, StRM or EWM, we shape processes that reflect the way your warehouse works, not how the system thinks it should work. The result? Less waiting, fewer errors, smoother flow and more productive operators from day one.

Deep SAP warehouse expertise: from people who know the floor

Warehouse leaders choose us because we understand your world.

We've spent decades working inside warehouses, distribution centres and logistics operations.

Our consultants bring hands-on expertise across:

- SAP EWM and LGM design, build and optimisation
- IM, WM and StRM process redesign
- Picking, putaway, replenishment and task interleaving
- Wave/waveless strategies
- Automation and MFS integration (conveyors, AGVs, voice, robotics)

- Yard management and labour planning

We don't write theoretical recommendations. We solve real operational problems with precision.

We make SAP work for your operation. Not the other way around.

EWM consulting that keeps operations moving

If you're running a complex operation or planning to scale, SAP EWM gives you the visibility and control you need. We help you make the most of it.

Our specialists design EWM solutions that improve speed, accuracy and resilience across:

- Inbound, outbound and internal warehouse flows
- Slotting, replenishment and intelligent putaway
- Exception handling and bottleneck reduction
- Performance tuning and stabilisation
- Multi-site rollouts and global templates

We make sure EWM is configured to perform, not just to meet requirements.

Fix what's slowing you down

If your operation is experiencing issues: slow picking, inaccurate stock, delays, user frustration, poor system performance; we diagnose the root cause and fix it fast.

Our SAP warehouse diagnostics give you:

- A clear view of what's working, and what isn't
- Insight into processes, configuration, data and integrations
- Recommendations prioritised for maximum operational impact

The goal is simple: get your warehouse running at full strength, with fewer disruptions and more control.

Hands-on support that shows up when you need it

Warehouses run 24/7. Issues don't wait. Neither do we.

Our SAP AMS and consultancy support give you:

- Fast issue resolution from real warehouse experts
- Enhancements, fixes and process improvements
- On-site or remote support
- Day-to-day guidance you can rely on

We work as an extension of your team. Fully accountable, fully invested.

Why warehouse leaders trust TCT

We know SAP supply chain deeply

It's all we do, and we do it exceptionally well. We understand warehouse reality. Not just the system. The pace, the people, the pressure.

We move quickly with accelerators that deliver

30+ years of SAP supply chain experience has allowed us to build project accelerators that make SAP work. You need change that lands fast. We deliver it.

We solve problems with precision.

No fluff. No jargon. Just practical, effective solutions.
